

RUFFNECK LEARN

AI Literacy for Nigerian Professionals

Professional Resource Pack

Practical templates, checklists, examples and implementation tools for responsible AI use at work.

Course level: Beginner → professional application

Use: lesson practice, workplace implementation and capstone preparation

1. AI Task Selection Checklist

Before using an AI tool, classify the task.

Question	Yes/No
Is the task suitable for AI assistance?	
Does it involve confidential or restricted information?	
Can the source information be verified independently?	
Does the task require human judgement or approval?	
What is the acceptable output format?	
What quality standard must the final output meet?	

Professional rule: AI assistance does not transfer accountability. The person submitting the final work remains responsible for accuracy, confidentiality and appropriateness.

2. Prompt Engineering Template

Role: What professional role should the AI assume?

Task: What exactly must be done?

Context: What information does the AI need?

Constraints: What must be included, excluded or avoided?

Output: What format, length and structure should be returned?

Quality check: What should the AI verify or flag?

Example: You are an administrative officer. Convert the following meeting notes into a professional action register. Identify each action, responsible person, deadline and dependency. Do not invent missing information. Mark unknown fields as "Not specified". Return a clean table.

3. AI Output Verification Checklist

Check	Completed
Names, dates and figures checked against source material	
Claims requiring evidence have been verified	
No fabricated citations or references	
Tone is appropriate for the intended audience	
Sensitive information has been removed or protected	
Final document has been reviewed by a human	

4. AI-Assisted Professional Workflow Canvas

Stage	Your workflow
1. Trigger	What starts the task?
2. Input	What information is available?
3. AI assistance	What should AI do?
4. Human review	What must a person verify?
5. Output	What final deliverable is produced?
6. Storage	Where is the approved output kept?
7. Follow-up	What happens next?

5. Responsible AI Workplace Checklist

- Do not paste passwords, private credentials or unnecessary personal information into AI tools.
- Use only information that you are authorized to process.
- Verify important outputs before relying on them.
- Keep human approval for decisions affecting people, money, compliance or reputation.
- Record the source of important facts and data.
- Use organization-approved AI tools where applicable.

6. Professional AI Use Case Planner

Use this for the course capstone or workplace implementation.

Field	Response
Business/work problem	
Current manual process	
Time/frequency cost	
AI opportunity	
Tool(s) selected	
Prompt/workflow design	
Human review point	
Risk/privacy controls
